

Weekly Report

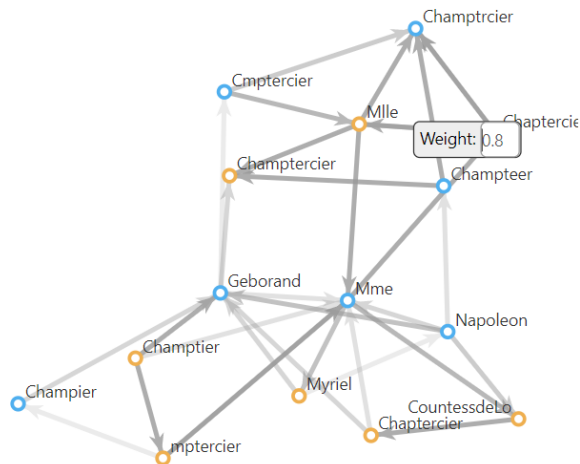

1 Done

1.1 Project

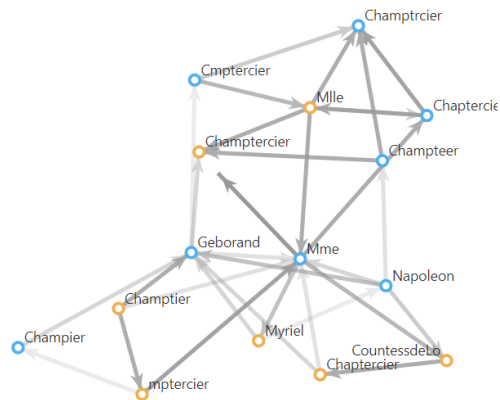

- Writing:
<https://www.overleaf.com/read/ynbpgxjsngfy>
- Coding:
Implement interactions about editing inferences.

Modify the weight of an edge (edit the confidence about an inference) by right-click. The inference will be deleted if the weight is set to 0.

Drag from a node to another one to add an edge (create new inference).

- Discussion

I talked with Prof. Ma about our idea. He thinks that it makes sense and this idea can be adapted better to actual application than previous projects. He also has some acquaintances doing researches about privacy and security. I will have chances to consult them. Moreover, if we can achieve the desired results, we can attempt to publish it on both TVCG and journals about security for more citation.

As for myself, he asked me to talk more with foreign students and improve writing skills, not only grammar and ornate diction, but also the article structure.

2 Remark

UC, Davis has a winter holiday from 16th, Dec to 3rd, Jan. So, I took my time to visit Las Vegas and Lake Tahoe. And now, I'm back to work.
